

Bloodborne Pathogens

Are you in compliance with the OSHA standard?

OSHA's Bloodborne Pathogens Standard (29 CFR 1910.1030) requires employers to safeguard employees who face potential occupational exposure to blood and other potentially infectious materials. The National Safety Council Bloodborne and Airborne Pathogens course helps reduce these risks by focusing on how to protect your employees from bloodborne and airborne pathogens and what to do if an exposure occurs.

If you are interested in teaching Bloodborne and Airborne Pathogens, the National Safety Council makes it easy. You can purchase the Instructor Resource Kit and start teaching right away.

What you'll learn

- Introduction to bloodborne pathogens, including hepatitis viruses and HIV
- Preventing infection from bloodborne pathogens
- Airborne pathogens, including tuberculosis
- Influenza and potential influenza pandemic

Course description

This revised course includes additional statistics about HBV, HCV and HIV, as well as updated information on airborne pathogens, the Needle Stick Safety and Prevention Act, TB testing, and influenza. The course also has an expanded section on recordkeeping and exposure control plans.

Course materials

Instructor Resource Kit

- 36-page Instructor Manual
 - CD with PowerPoint® presentation
 - 21-minute DVD
 - Student Workbook
- Student Workbook
- 64 pages with full-color photographs
 - Includes nationally recognized course completion card

Who would benefit

- Dentists and dental hygienists
 - Lab workers
 - Animal handlers
 - Custodians
 - Anyone who may come in contact
 - Police officers
- with blood or potentially infectious materials
